Concepts, Best Practices, Roadmap

Symposium, April 26, 2006 - Hall in Tirol

Europe is heading towards the goal of providing access to electronic patient data regardless of time and place and of networking different health care organizations and providers. The organizational and technical realizations (players involved, concepts, architectures, standards, etc.) differ from country to country, just as the present level of implementation. Scandinavian countries - especially Denmark – have gained a reputation for being at the very forefront of these developments. Austria, in turn, is currently in a process of catching up with these best practice regions – through its eHealth-Initiative and with regional telematic-strategies and -projects.

At this eHealth-benchmarking symposium, experts from various countries (Denmark, Germany, Italy and Austria) present eHealth-strategies, solutions for providing access to patient data and on-going EHR-projects and try to compare the various approaches and highlight future developments.

Furthermore, experts working on Europe-wide standards and strategies in terms of electronic patient summaries provide an insight into the present activities and status and try to compare different country-specific implementation strategies and concepts.

Target audience

This symposium offers a great opportunity for those who wish to keep abreast of the latest developments in eHealth .The symposium is addressed to audience interested in eHealth, telematics and electronic patient summaries and especially to decision makers in health care organizations and politics.

Symposium language

English

Organising committee

The eHealth-benchmarking symposium is organised by the center of excellence **HITT – health information technologies tirol** and **UMIT – university for health sciences, medical informatics and technology**.

Detailed program

time	topic
08:30 - 09:00	Registration and coffee
09:00 - 09:15	Welcome Address Raimund Vogl, CEO of HITT and Bernhard Tilg, Head of UMIT
09:15 - 09:30	Political Reception Elisabeth Zanon, deputy governor of Tirol responsible for health care
09:30 - 10:00	Keynote – Scenarios, Problems and IT-solutions to Support Cross-Sectoral Health Hans-Ulrich Prokosch, University of Erlangen
10:00 - 10:30	Austria – Austrian eHealth-Initiative & Strategy Karl-Peter Pfeiffer, Medical University of Innsbruck
10:30 - 11:15	Austria – Regional Activities, ecard, Connection with Research Networks Thomas Schabetsberger, UMIT, Project leader health@net Günter Schreier, ARC Seibersdorf, eHealth-Systems
11:15 - 11:30	Coffee break
